TABLE OF CONTENTS

01 **INTRODUCTION**
Your Money Is Waiting

02 **THE PROBLEM**
Why Creators Lose Fees

03 **THE SOLUTION**
One Search. Every Dollar.

04 **HOW IT WORKS**
From Handle to Fees in 30s

05 **SUPPORTED PLATFORMS**
10 Platforms, 2 Chains

06 **ARCHITECTURE**
Engineered for Speed

07 **SECURITY & PRIVACY**
Your Privacy, Protected

08 **ROADMAP**
V1 Is Just the Start

09 **TEAM**
The Team Behind ClaimScan

SECTION 01

WHAT IS CLAIMSCAN?

Every day, creators leave thousands of dollars unclaimed across DeFi. ClaimScan is the first cross-chain fee recovery tool built for creators. It scans 10 launchpads across Solana and Base in real time, surfacing every dollar you've earned, claimed, and left behind.

> *Your fees are sitting unclaimed right now. ClaimScan finds them. 10 pl atforms. 2 chains. Zero excuses.*

KEY METRICS

10 PLATFORMS TRACKED	**2** BLOCKCHAINS	**~40%** FEES UNCLAIMED
<30s SCAN TIME	**FREE** ALWAYS	**24/7** LIVE TRACKING

Whether you launched on Pump.fun last week or Clanker six months ago, ClaimScan has your back. Enter any handle or wallet address and see exactly what's waiting for you. No signups. No fees. Just your money.

SECTION 02

THE CREATOR FEE PROBLEM

You launched a token on Pump.fun. A few on Clanker. Maybe one on Believe. Each platform deposited creator fees into different wallets, using different mechanisms, on different chains. You forgot to claim some. You didn't even know about others. Right now, your money is sitting unclaimed across DeFi.

TOO MANY DASHBOARDS

01

10 platforms. 10 different dashboards. 10 different login flows. No creator checks all of them. Most check zero. The friction kills your claim rate, and your revenue disappears.

TWO CHAINS, DOUBLE THE HASSLE

02

Solana and Base speak different languages. Different wallets, explorers, RPCs, and token standards. If you launched on both chains, you need two completely separate workflows just to see what you're owed. Nobody has time for that.

SCATTERED IDENTITY

03

Your @handle on Twitter, your Farcaster FID, your GitHub, your 0x wallet, your Solana address. All disconnected. Platforms only see fragments of you. No tool connects the dots. Until now.

RESULT: MILLIONS IN CREATOR FEES LEFT UNCLAIMED

SECTION 03

HOW CLAIMSCAN SOLVES IT

ONE SEARCH, ALL PLATFORMS

Type your @handle. That's it. ClaimScan fires parallel queries across all 10 platforms and delivers your complete fee picture in under 30 seconds. No logins. No switching tabs.

TWO CHAINS, ONE DASHBOARD

Solana and Base, unified. ClaimScan scans both ecosystems simultaneously and merges the results into a single view. Everything you're owed, in one place.

ALWAYS UP TO DATE

Live polling catches newly accumulated fees the moment they appear. Your dashboard is always current. Set it and forget it. We keep watching.

YOUR HANDLE FINDS YOUR WALLETS

Enter a Twitter handle, and we find the wallets. Enter a Farcaster FID, and we map it to every chain. ClaimScan resolves your identity graph automatically.

SEE REAL DOLLAR AMOUNTS

Raw token amounts mean nothing without context. ClaimScan converts everything to USD using live price feeds from multiple sources. No more guessing.

ZERO COST, ZERO CATCH

Free. Not freemium. Not "free trial". Free. We built ClaimScan for ourselves first. Now every creator in the ecosystem can use it. No token. No premium tier. Just value.

SECTION 04

HOW IT WORKS

From @handle to full fee breakdown in under 30 seconds. Here's how.

1

ENTER YOUR IDENTITY

Type a Twitter handle, GitHub username, Farcaster handle, or wallet address. ClaimScan accepts multiple identity formats including direct URLs.

2

WE FIND YOUR WALLETS

Social identities are resolved to wallet addresses using on-chain data and social graph APIs. Multiple wallets can be discovered from a single identity.

3

SCANNING 10 PLATFORMS

Simultaneously queries 10 launchpad APIs and smart contracts across Solana and Base. Each platform adapter handles its own data format and claim mechanisms.

4

COLLECTING YOUR FEES

Collects earned, claimed, and unclaimed fee data per token per platform. Data is normalized and deduplicated across all sources.

5

CONVERTING TO USD

Live price feeds from multiple sources convert native token amounts to real dollar values. Prices are cached and continuously refreshed for accuracy.

6

YOUR LIVE DASHBOARD

Results displayed with live polling that keeps your dashboard current, platform breakdown, chain breakdown, token-level details, and claim status indicators.

NOTE: All scanning is read-only. ClaimScan never requires wallet connections or signatures.

SECTION 05

SUPPORTED PLATFORMS

10 platforms across 2 blockchains. More coming in V2.

SOLANA — 7 PLATFORMS

- **Pump.fun**
  The largest Solana token launchpad
- **Bags.fm**
  Social-first token launcher
- **Heaven**
  Creator-focused launchpad
- **Believe**
  Community-powered launches
- **RevShare**
  Revenue-share for creators
- **Coinbarrel**
  Fast token launches
- **Raydium**
  Top Solana DEX

BASE — 3 PLATFORMS

- **Clanker**
  Base-native token launcher
- **Zora**
  Media & creator protocol
- **Bankr**
  DeFi on Base

+ More platforms coming in V2
Ethereum L1, Arbitrum, and more

MORE PLATFORMS ARE BEING ADDED CONTINUOUSLY

ClaimScan V2 will expand to additional chains and launchpads.

SECTION 06

ARCHITECTURE & TECH STACK

FRONTEND	React + Tailwind CSS
BLOCKCHAIN	Solana + EVM (Base)
DATABASE	SQL database with access controls
PRICE FEEDS	Multi-source price aggregation
IDENTITY	Social identity resolution across platforms
MONITORING	Error tracking + analytics
DEPLOYMENT	Serverless infrastructure
TYPOGRAPHY	Exo 2 (headings) + JetBrains Mono

KEY ARCHITECTURE DECISIONS

- **Real-time streaming** -- Platform results delivered as they complete, not all at once
- **Smart caching** -- Multi-layer caching with background indexing for fast lookups
- **Optimized routing** -- All routes tuned for fast execution with parallel fetching
- **Visibility-aware polling** -- Live updates pause when tab is hidden, resume on focus
- **Privacy-first** -- Search queries anonymized before logging. No raw PII stored

SECTION 07

SECURITY & PRIVACY

No wallet connections. No data stored. No exceptions. By design.

PRIVACY-PRESERVING SEARCH

Your search queries are never stored in readable form. We anonymize all lookups before logging. Your identity searches remain private.

SERVER-SIDE ISOLATION

All sensitive operations run server-side only. Nothing secret ever touches the browser. Keys and credentials stay where they belong.

CONTENT PROTECTION

Proprietary content and data displays are protected against unauthorized reproduction and scraping attempts.

NO WALLET CONNECTIONS

ClaimScan is completely read-only. We never ask for wallet signatures, approvals, or any form of blockchain write access. Zero transaction risk.

ZERO DATA COLLECTION

No personal data stored. No cookies. No tracking beyond anonymized analytics. Your privacy is not a feature. It's the default.

VERIFIABLE ON-CHAIN DATA

Every fee record displayed can be independently verified on-chain. ClaimScan reads directly from smart contracts and public APIs. No black boxes.

SECTION 08

WHAT'S NEXT

V1 CURRENT | MARCH 2026

- > 10 platform support (Solana + Base)
- > Multi-identity search (Twitter, GitHub, Farcaster, Wallet)
- > Real-time fee polling with live updates
- > USD conversion with live price feeds
- > Mobile-responsive brutalist design
- > Privacy-preserving search analytics

V2 COMING SOON

- -> Additional chain support (Ethereum L1, Arbitrum, etc.)
- -> More launchpad integrations
- -> Historical fee tracking & analytics
- -> Email/Telegram notifications for new unclaimed fees
- -> Portfolio dashboard for multi-creator agencies
- -> API access for third-party integrations

V3 FUTURE

- -> One-click claim across all platforms
- -> Automated claim scheduling
- -> Creator analytics & insights dashboard
- -> SDK for platform integrations

This is V1. We ship fast.

Follow @lwartss for V2 announcements.

SECTION 09

BUILT BY LW TEAM

LW is not an agency. We're a 4-person Web3 development studio that ships real products. No layers. No outsourcing. Every project is built by the same people you talk to on Telegram.

> *We've been deep in crypto since 2021. We survived rug pulls, bear markets, and hype cycles. We don't just build. We understand the market.*

408+	$1.6B+
PROJECTS DELIVERED	MARKET CAP GENERATED

THE TEAM

LW-2201 **BRANDING SPECIALIST**

Brand psychology, logos, visual identity

LW-2202 **FRONTEND DEVELOPER**

Websites, dApps, bots, dashboards

LW-2203 **BACKEND ENGINEER**

APIs, databases, contract integrations

LW-2204 **MOTION DESIGNER**

Promo videos, animated logos, TGS stickers

ClaimScan started as our own tool. We needed it. Nobody built it. So we did.
